

- Temp + Pressure look good
- GPS worked as soon as at surface
- Battery, Programming, Mechanics all Sat.

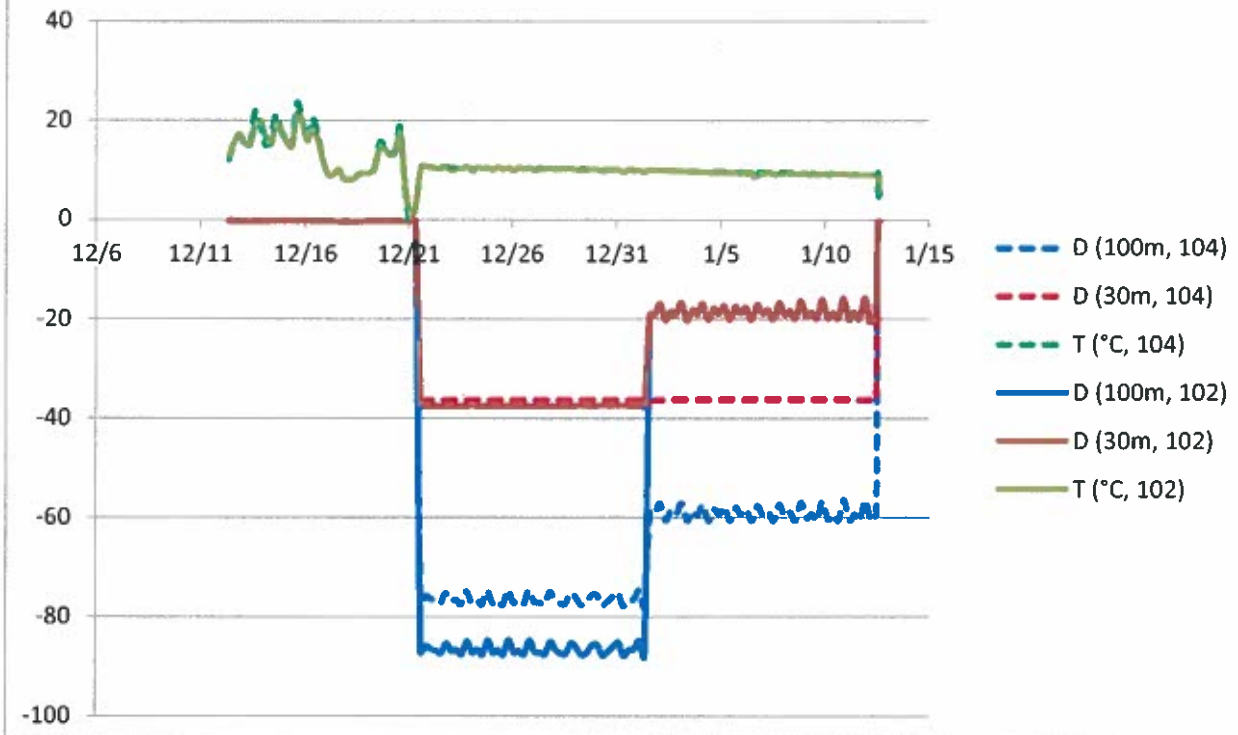

- Set wrong time on burn wire - no profile
- PAR only occasionally sampled: issue w/ software, hopefully easy fix
- Iridium didn't work on 1st attempt: could be no satellite overhead or not enough freeboard. More testing needed.

★ Next Steps:

- Check PAR sensor sampling
- Re-deploy in Puget Sound for short test to get profile (2-5 days)
- Test Iridium transmissions in water: effects of freeboard and sea-state

Units 102 and 104

Temp Only - Units 102 and 104
